

LET'S PROTECT OUR SEA

We live very close to the sea

We have beaches and many places to go

But last month thousands of fish were found dying close to the beach

My teacher explained that it was because of the Carnival

I couldn't understand why! The carnival?

Because young people usually litter bags of water

Once it explodes, the plastic remains in the street

Then, it is going to the sea through the sewage

Fish eat the bags, as they think it's a jellyfish

And then they can't breathe and die.
